## 290 YEARS OF SERVICE!

A business is no better or worse than the people who serve it. Although we have a modern building and the latest scientific equipment available to work with, we feel that our **capable staff** is of much greater value to us in providing our customers with the best possible service in seeds, plants, and bulbs.

In a business involving as much detail as flower seeds, there is much for a new person to learn. It takes time to **train** people to do an important job. There are few "youngsters" in terms of length of service in our organization. In the above picture, only four have been with us less than five years, four more between five and ten years, six have been with us for ten to twenty years, and **eight over twenty years**—an over-all average of over 13 years and a total of 290 years of experience and service! Many other similar service records can be found among 100 additional members of our staff not included in this photo.

**Our traveling men** (pictured below) are also well equipped with experience and training to serve you capably. We sincerely thank you for past favors and always appreciate an opportunity to prove to you that we continue to have the **ability** to serve you.

With warm greetings to our trade friends and best wishes for a prosperous 1956!

### PETUNIAS

#### Unlimited recommendations on this one . . . . .

**White Magic.** **F<sub>1</sub> HYBRID** Pictured on front cover. We think this is as great an improvement over Popcorn as the latter was over Snowstorm. White Magic has earliness, large ruffled grandiflora blooms of pure white, heavy production of flowers and dwarf habit of growth.  $\frac{1}{2}$  tr. pkt., \$1.75; tr. pkt., \$3.00;  $\frac{1}{128}$  oz., \$5.50;  $\frac{1}{64}$  oz., \$10.00;  $\frac{1}{32}$  oz., \$19.00.

This can best be described as a Tango-red which has caught on fire. Because of its rich golden throat which extends throughout and underlies the red of the petals, the whole effect is one of brilliant scarlet or Chinese red. Dwarf habit.  $\frac{1}{2}$  tr. pkt., \$1.75; tr. pkt., \$3.00;  $\frac{1}{128}$  oz., \$5.50;  $\frac{1}{64}$  oz., \$10.00;  $\frac{1}{32}$  oz., \$19.00;  $\frac{1}{16}$  oz., \$36.00;  $\frac{1}{8}$  oz., \$64.00.

#### And a new dwarf Vinca . . . . .

# Versatile Double Petunias FOR BEDDING, POTS, OR COMBINATIONS

## Growing and Selling Double Petunias at a Profit

**PETUNIA SPECIALIST**

Carl Hellgren (above) and A. E. Bjork, Glenbard Gardens, Lombard, Illinois, who are among the most progressive bedding plant growers in the Chicago area, make a specialty of Double Petunias, for sale both out of flats and out of 3-inch pots. They finish about 10,000 Petunias each spring for sale out of 3-inch pots for 25c each retail. Half of these are doubles—Ball All-Double Mix, two of which are shown being held by Mr. Hellgren in the above picture.

Uses of doubles range all the way from inexpensive flat sales to individual, well shaped 5-inch potted plants.

- Doubles are becoming increasingly popular for sale out of flats, bands, or pots for bedding use. Many bedding plant growers are selling them for the same price as single Petunias.
- For combinations—boxes or pots—they can't be beat! Large, full, double, long-lasting blooms in bright colors on compact plants.
- Many growers use 3-inch or 4-inch pots of well developed blooming doubles for the more "expensive" bedding plant trade. The Ball All-Double Mixture is especially good for this purpose.

However you use them, Ball All-Double Petunias can make money for you—they are the world's finest strains; tested, selected varieties from Canada, the United States, and Japan. Our recommendations are based upon complete trials of all available varieties, both in 3-inch pots in our greenhouses in the spring, and outside in our summer trials.

### Unsolicited Comments:

"Out of last year's trade packet of Canadian All-Double Petunias, I sold 225 4-inch plants at \$1.00. Plants were excellent and grew very stocky."

—Wakelee Greenhouse, Waterbury, Connecticut.

"I got in December 1/28 ounce Ball's All-Double Petunias and had 1600 plants out of them. We thought that good."

—Mr. Arvid H. Johnson, Cassadaga, New York.

## VICTORIOUS (Japanese) STRAINS

**Gaiety** (Pictured in arrangement on opposite page.) The blotched or variegated flowers combine bright rose-pink with contrasting pure white to produce a "Strawberries and cream" effect. The blooms are medium large, well doubled and fringed, and are carried on dwarf, base-branching plants—qualities which go to make an excellent Petunia for pots. The most popular Victorious variety.

**Orchid Beauty, Improved.** Orchid, heavily veined deep violet.

**Fantasy** (Purple and White.) Striped purple and white.

- **Attraction.** Striking, brightly colored rose and white mottled. Medium habit.

- **Pink Perfection** (World Beauty). Deep rose color and uniformly dwarf growth.

## CULTURAL SUGGESTIONS

Doubles must be sown earlier than ordinary Petunias to bloom at the same time. We recommend (Chicago, 50°) January 1 sowing for strong 3-inch for bedding plant sales in late May. For Mother's Day combinations, heavy 3-inch should be sown December 15—no later. For 4- or 5-inch for April and May potted plant sales, a well shaped plant with several blooms needs a November 15 sowing. Doubles, like other Petunias, need good drainage, and cool temperatures—they will lose their dwarf habit of growth if temperatures are run up above 55° (unless there is an abundance of sunshine to offset this).

Certain varieties need one pinch to retain suitable shape for finished plants. They all break very readily. Sonata, Snowball, and Minuet are especially responsive to a pinch.

# F<sub>1</sub> Hybrid Grandiflora

A new era has arrived for Petunia F<sub>1</sub> Hybrids. What are they?

F<sub>1</sub> Hybrid Petunia seed (like Hybrid Snaps and Hybrid Corn) is seed saved from an artificial cross of two specially selected parents—both impart special qualities to the cross and together produce an amazing degree of vigor known as heterosis. Seed saved from F<sub>1</sub> Hybrids generally revert to parent types, producing mixed colors and undesirable types.

What are their advantages?

- **Greater uniformity.** No substantial variation in color or habit of plants.

(Continued top next page.)

**FIRE DANCE**

## A Pair of Aces for '56!

There are several new F<sub>1</sub> Hybrid Petunias being offered on these pages for 1956—of these we recommend **Fire Dance** and **White Magic** as “must grow” varieties to all bedding plant growers this year.

**Fire Dance** in our trials did not make quite as satisfactory growth as Tango, but the color combination of red petals and gold throat easily justifies its All-America Award and makes it a “must.”

**White Magic** is as clear and distinct an improvement over existing whites as Popcorn was over Snowstorm—earlier blooms (helpful in spring sales), free flowering and dwarf habit make this white a real winner—a “must” for '56.

### FIRE DANCE

**F<sub>1</sub> HYBRID** ALL-AMERICA SELECTION (New — All-America bronze medal winner for 1956). This can best be described as a Tango-red which has caught on fire. Because of its rich golden throat which extends throughout and underlies the red of the petals, the whole effect is one of brilliant scarlet or Chinese red compared with the darker red of the variety Tango. Fire Dance is a large fringed grandiflora and is quite free flowering. ½ tr. pkt., **\$1.75**; tr. pkt., **\$3.00**; 1/128 oz., **\$5.50**; 1/64 oz., **\$10.00**; 1/32 oz., **\$19.00**; 1/16 oz., **\$36.00**; 1/8 oz., **\$64.00**.

**WHITE MAGIC**  
“Fashion Flower for '56”

### WHITE MAGIC

**F<sub>1</sub> HYBRID** (New). Earliness, large ruffled grandiflora blooms of pure white, heavy production of flowers and dwarf habit of growth are shared in this remarkable new Petunia. Ideal either in pots or for bedding. ½ tr. pkt., **\$1.75**; tr. pkt., **\$3.00**; 1/128 oz., **\$5.50**; 1/64 oz., **\$10.00**; 1/32 oz., **\$19.00**.

# Petunias

- **Greater vigor.** Fast, strong growth is greatest single advantage of F<sub>1</sub> Hybrids. More plant—more blooms.
- **New colors** are possible from special parent combinations. Considering the low percentage of seed cost to your total receipts for bedding plants, you can afford only the best. Sturdier, larger, more vigorous plants, greater uniformity, plus unique new colors combine to make an unbeatable combination to offer your customers.

## Multifloras vs. Grandifloras?

Grandifloras are extra large flowered, ruffled and fringed, with medium dwarf habit. **Multifloras** produce medium sized, plain-edged flowers, generally somewhat more erect in growth, limiting their usefulness in pots. Ideal for flat sales and bedding use. Both have their place, but the **Grandifloras** are equally salable as flatted plants, out of pots or for combinations. They represent the "real quality" in modern Petunias. Multifloras are somewhat more colorful—"showier" in mass plantings.

CRUSADER

## CRUSADER

**HYBRID** 11 in. Gaily striped, extra bright rose-pink on pure white. The liveliest, most attractive bicolor we've offered. Grown in shade the color balance will go to the dark side. Adverse cultural conditions seem to cause them to become lighter, but restoration of normal cultural conditions restores normal color.

½ tr. pkt., \$1.35; tr. pkt., \$2.50; 1/128 oz., \$4.50; 1/64 oz., \$8.00; 1/32 oz., \$15.50; 1/16 oz., \$30.00; 1/8 oz., \$57.00; 1/4 oz., \$108.00.

### Unsolicited Comments:

"I have always found your seeds to be outstanding in quality and your service exceedingly prompt, which is very helpful."

—C. C. Hathaway, Silver Spring, Md.

PRIMA DONNA

### PRIMA DONNA

(New.) **HYBRID** **ALL-AMERICA SELECTION** Large, heavily ruffled bright rose flowers with darker veins on vigorous, spreading, base-branching plants. Quite similar to the popular Ballerina except for color, and promises to be equally valuable.

- **Ballerina.** **HYBRID** **ALL-AMERICA SELECTION** Extra large frilled flowers of clear, intense salmon that hold their color well under summer sun.
- **Bolero.** **HYBRID** 11 in. Compact, medium rose fringed. Variable and not as vigorous as most hybrids. Prefer and recommend Prima Donna instead.
- **La Paloma.** **HYBRID** 13 in. Large, well fringed flowers of purest white with yellow throat and remarkable vigor are the outstanding points about this fine Hybrid Petunia.
- **Minstrel.** **HYBRID** (New). Large, ruffled flowers in various combinations of white and rich violet-blue. Vigorous, free flowering and very showy. While the blooms are not quite as large as the inbred variety, Royalty, Minstrel is much more true-to-type and more desirable in every way. **Limit 1 tr. pkt.**

### TANGO

**HYBRID** 10 in. A bushy plant with luxurious deep green foliage against which the large, bright salmon-scarlet flowers literally stand out like flares. Flowers are moderately fringed and ruffled, and are freely produced. Makes a fine pot plant and is equally good for bedding. Most popular F<sub>1</sub> Hybrid Grandiflora.

- **Flirt** (New.) **HYBRID** Medium sized, clear bright pink flowers are freely produced on vigorous but fairly compact plants. An entirely new color in Hybrid Petunias, and one that should prove to be quite popular.
- **Fairyland** (New). **HYBRID** Medium large fringed and ruffled flowers of a soft shrimp-salmon shade; lighter than Ballerina. Vigorous and free blooming.
- **Blue Mantle** (New). **HYBRID** Medium sized ruffled flowers of rich violet-blue. Fairly dwarf but erect plant with blooms well displayed. A good bedder, but especially nice for pots.
- **Fire Gleam** (New). **HYBRID** Medium sized ruffled flowers of brilliant, creamy cherry-red—a color that almost seems to glow as if lighted. Vigorous, dense plants and extremely free flowering. One of the best F<sub>1</sub> Hybrid Petunias in our entire trial ground last season. **Limit 1/128 oz.**

### HYBRID GRANDIFLORA MIXTURE

(New). Enough good F<sub>1</sub> Hybrid Grandiflora Petunias varieties are now available to enable us to offer this carefully blended formula mixture which we make up ourselves. Contains both fringed and ruffled types.

**Prices** above 11, each: ½ tr. pkt., \$1.35; tr. pkt., \$2.50; 1/128 oz., \$4.50; 1/64 oz., \$8.00; 1/32 oz., \$15.50; 1/16 oz., \$30.00; 1/8 oz., \$57.00; 1/4 oz., \$108.00.

COMANCHE

LINDA

## F<sub>1</sub> Hybrid Multifloras

The Indian Series is offered to help you to sell these free flowering, vigorous **Multifloras** as a group or series. They have somewhat similar height and plant shape, plant well together, bloom the same time. Let one Indian help sell another. Use Comanche to kick off the tribal procession!

### Indian Series

- **Comanche.** **F<sub>1</sub> HYBRID** **VAL-AMERICA** **SELECTION** (Pictured above). 13 in. A brilliant scarlet-crimson, deeper and more intense than Fire Chief, with larger flowers produced in great abundance on vigorous, fast growing plants. This is the finest red bedding Petunia we have ever seen. A "must" on your list!
- **Apache.** **F<sub>1</sub> HYBRID** (New). 11 in. An intense deep cerise-rose similar in color to Lipstick but much more vigorous and productive.
- **Mohawk.** **F<sub>1</sub> HYBRID** (New). A bright rose-pink between Rose Charm and Pink Sensation in color, and similar in habit to the latter. Very vigorous and free flowering.
- **Paleface.** **F<sub>1</sub> HYBRID** (New). 10 in. Without question the most vigorous and extremely free flowering white bedding Petunia in existence, and one of the most noteworthy in our outdoor trials last season. Pure white flowers with small creamy eye.

### There Really is a Difference

The row on the left is the popular Dwarf Hybrid white, Snowball Imp., photographed in our trials last July. The two rows to the right are F<sub>1</sub> Hybrid, Paleface, similar to Snowball Imp. but much more vigorous and free flowering.

- **Sioux.** **F<sub>1</sub> HYBRID** (New). 11 in. A deep, intense salmon shading toward red at throat. Midway between Linda and Comanche in color. Very vigorous and blooms profusely.

### Other Multifloras

- **Rose Charm.** **F<sub>1</sub> HYBRID** 12 in. Rich, brilliant rose, wonderfully vigorous, free branching and flowering. In our trials each plant reaches a spread of over 2 feet and is literally a solid mass of bloom. Rose Charm has an ideal "bedding" habit of growth. Somewhat procumbent in habit as compared with most Petunias, it forms a sort of "mat" or carpet of bloom in which one plant joins to its neighbor. A real "floral ground cover!"
- **Silver Medal.** **F<sub>1</sub> HYBRID** **VAL-AMERICA** **SELECTION** 11 in. Medium large flowers of soft salmon-pink are lavishly produced on free-branching, semi-upright type plants. Here is an ideal shade for the trade which likes soft pastel colors.
- **Pink Sensation.** **F<sub>1</sub> HYBRID** **VAL-AMERICA** **SELECTION** 15 in. One of the most vigorous, free flowering, fast growing "showy" Petunias we have ever seen. This color is near Fair Lady—a light silvery pink. A very useful Petunia for bedding where a real show of color is wanted.
- **Linda.** **F<sub>1</sub> HYBRID** (Pictured above). 9 in. Brilliant rosy salmon flowers similar to Silver Medal are carried on bushy, solid plants of great vigor. Will withstand heavy wind and rain without plants breaking down. Somewhat more dwarf than Silver Medal. We find demand for salmon Multiflora Petunias gradually shifting to this variety from Silver Medal.
- **Brilliancy.** **F<sub>1</sub> HYBRID** (New). Quite similar to Apache in its deep cerise-rose coloring but taller and more vigorous in growth. Makes a wonderful show for bedding.

**F<sub>1</sub> HYBRID** **Multiflora Mixture** (New). Our own formula mixture of the F<sub>1</sub> Hybrid Multifloras blended to provide a well balanced mixture of colors.

**Prices** all above varieties: 1/2 tr. pkt., \$1.00; tr. pkt., \$1.75; 1/128 oz., \$3.50; 1/64 oz., \$6.50; 1/32 oz., \$11.70; 1/16 oz., \$20.00.

# California Giant Petunias

285,000 S. Equally at home as pot plants, in combinations of all sorts, and planted out in beds, California Giant Petunias never fail to draw the interest of Petunia buyers. Our finest strain, for early blooming and dwarf habit with extra large flowers, is Ball Dwarf Giant No. 1. Our other listings are most suitable for bedding, and are O. K. for combinations if a little extra height is desirable.

Sow December 15 for heavy 3-inch for Mothers Day combinations and plant sales. January 10 sowing will make blooming 3-inch for late May sales.

## ● Ball Dwarf Giant No. 1—For Pots

(See illustration.) This is the finest Giant Petunia for spring sales flattened or in pots and combination pots or boxes because:

- It is earliest blooming—will throw one large bloom very early in the growth of the plant—**this makes it sell on sight.**
- It is dwarf and compact in habit throughout the season. Does not become "leggy."
- Has largest flowers with delicately netted open throats. The superiority of this strain over other Giant Petunias is maintained by yearly greenhouse selections and trialing at West Chicago. Over 90% large flowers, in shades of orchid, rose, red and bicolors.  $\frac{1}{2}$  tr. pkt., \$1.00; tr. pkt. \$1.75;  $\frac{1}{64}$  oz., \$2.75;  $\frac{1}{32}$  oz., \$5.00;  $\frac{1}{16}$  oz., \$9.50;  $\frac{1}{8}$  oz., \$18.00;  $\frac{1}{4}$  oz., \$34.00.

## Three Separate Colors . . .

from this mixture are also available. Some growers buy these colors separately and mix according to their own requirements.

- **Ball Dwarf Giant No. 2—For Bedding.** Some growers prefer this strain for bedding use because it is somewhat more vigorous in growth and includes some pink and copper shades which it is impossible to breed into the extra dwarf, early blooming No. 1. Taller and somewhat later blooming than No. 1.

**Ramona.** Large, open throated flowers about half rose, balance pink and lavender. 95% large flowered. Bred especially for pots and combinations.

## ● POPCORN

Picture the huge glistening white flowers of Snowstorm or White Queen carried on low-growing, upright plants and you have this fine variety. Makes a wonderful plant for pots or combinations, and is equally at home for bedding. Originated by Waller-Franklin Seed Co. A Ball introduction in 1953. 285,000 S. There are 3 distinct classes of Grandifloras: the Ruffled, the Fringed, and the Dwarf. Like all Petunias, the most vigorous are the tall ones. The Dwarf Grandifloras make ideal pot plants, but for bedding most of them do not hold up where summers are very warm.

## RUFFLED GRANDIFLORAS

- **White Queen**. 12 in. Extra large, wavy, pure white flowers and vigorous growth make this a truly outstanding Petunia. Fine for bedding or pot plant use.
  - **Snowstorm**. 12 in. Fine, large flowered white. Similar to White Queen. Makes a nice pot plant.

## CARNIVAL

(New.) A colorful mixture containing all shades found in the Grandiflora type. Carnival is an entirely new type of Petunia, neither F<sub>1</sub> Hybrid nor line bred. It is midway between the two types in vigor. F<sub>2</sub> Petunia seed is seed saved from especially bred and selected F<sub>1</sub> Hybrid varieties. The F<sub>2</sub> seed retains some of the hybrid vigor as well as some uniformity. Carnival is the first such F<sub>2</sub> variety offering in a mixture in the large flowered class. We hesitate to recommend **substantial** use of this variety for bedding plant purposes, as our trialing has been limited. Suggest you try some to determine whether it is well adapted for your use. Tr. pkt., **\$1.50**; 1/32 oz., **\$3.85**; 1/16 oz., **\$7.00**; 1/4 oz., **\$21.00**; 1 oz., **\$63.00**.

# Dwarf Grandiflora Petunias

## Retain That Neatly Tailored Look

A general objection to Petunias for yard planting is the "straggly" look they get in mid-late summer. For the ultimate in dwarf, neat restricted growth habit, use these outstanding varieties. They have two principal advantages to florists.

1. They bloom very early in **pots** or **flats**.
2. They retain the dwarf, compact habit of growth throughout the year.

Part of our Petunia breeding work in recent years has been aimed at developing more satisfactory varieties in this class.

## POT PLANT TYPES

The past several years' breeding work has yielded several new Petunia varieties which seem admirably adapted to pot plant growth, but are not so universally useful for outdoor planting. Outdoors in an ideal environment these varieties will be quite attractive; but where conditions are not ideal they will appear somewhat inferior to their stronger growing brothers, such as F<sub>1</sub> Hybrids, Doubles, California Giants, Ruffled Grandifloras, etc. So we have taken the liberty of listing the following varieties separately to indicate a special adaptability to growth in pots in the greenhouse in spring. Many of the Petunias listed on the preceding 7 pages also make ideal pot plants. Check variety descriptions for our recommendations.

- **Carosel.** Try this unique lovely bright purple and white variegated Dwarf Fringed Grandiflora. It has gained in popularity steadily since its introduction.  
½ tr. pkt., \$1.00; tr. pkt., \$1.75; ¼ oz., \$3.30; ½ oz., \$6.00; ¾ oz., \$11.00.
- **Lace Veil.** Fringed, pure white flowers. Our present stock of Lace Veil is much more uniform and free flowering than two years ago. Habit similar to Setting Sun.  
Tr. pkt., 85c; ¼ oz., \$2.00; ½ oz., \$3.50.
- **Little Giants Mixed.** 8 in. Small, ruffled California Giant type flowers are freely produced on low growing, uniform plants. Ideal for pots and combination work as well as bedding. Colors range from amaranth-red through rose and pink to white.  
Tr. pkt., 75c; ¼ oz., \$1.50; ½ oz., \$2.75; ¾ oz., \$5.00.

**LITTLE GIANTS**

**Little Giants, Pink Shades.** 8 in. Same habit as Little Giants Mixed but in various shades of pink.

Tr. pkt., \$1.00; ¼ oz., \$1.75; ½ oz., \$3.00; ¾ oz., \$5.50.

**Martha Washington.** 8 in. Ruffled lavender-pink flowers; veined throat. Tr. pkt., 75c; ¼ oz., \$2.75; ½ oz., \$5.00.

# Plasticards

## The New Bedding Plant Merchandizer!

Growing problems have been pretty well solved. Here's a device to help you to **sell** more bedding plants.

**Plasticards** with authentic colorful pictures illustrate the blooming plant and will help you **show, describe, and convince** your customer of what he is buying.

**Plasticards** will help you put over a sale by giving you or your salesman a **sales boost at the point of sale** where it is needed most!

Specially designed Card-Holders are available to hold them 18 inches above the plants—one card so displayed will "cover" many flats with a sales boost. Two or more cards for each variety is, of course, even more effective.

Designed to allow space to write prices or other information of interest to your customer. A special pencil for writing on plastic is provided with each set.

Available for 50 of the most popular bedding varieties—see list below.

## NEW 1956 BEDDING PLANT POSTER

This is the same poster we sent you **free** with our Fall Flyer. Over 4 ft. long and 11 in. high, the new poster features 29 varieties, **which should increase your bedding plant sales.** We are making these available to you at cost, **25c** each. Postpaid.

# Popular Annuals For Bedding and Cutting

Listed alphabetically through page 56.

Perennials on pages 57 to 65.

To better enable you to judge the amount of seed you'll need for your planting requirements we have indicated the number of seeds per ounce of all important items listed. For example: **ACROCLINIUM**—8500 S means 8500 seeds per oz. These figures must NOT be accepted as indicating the number of plants to be expected. Under favorable germinating conditions most large seeds will germinate 60 to 70 percent. In figuring your seed requirements, keep in mind that it is also good practice to select only the most vigorous seedlings, except in the case of mixtures, when seedlings should be transplanted "as they come."

The dot (●) indicates varieties most dependably satisfactory in our experience and observation.

## Unsolicited Comments:

"Your promptness in handling seed orders without getting them all fouled up is one of your strong points. Keep up the good work."  
—DeLos C. Bristol, Marlboro, Mass.

"I want to thank you for the quick service on seeds after our recent unpredicted freeze. The seeds were planted less than four days after I mailed the order, and I didn't think it could be done under any conditions, but it was. We like your seed and service better than any other company we deal with. We also like your catalog; it is easier to read and understand and is informative, yet the descriptive material is never misleading."

—Van Jones, Jones & Son Nursery, Houston, Tex.

"Yours are the best seeds I have ever tried. I am getting almost 100% germination."

## Unsolicited Comments on Ball Asters

"We tried a sowing of Ball Asters in January. They hit Mother's Day and Memorial Day on the nose. They were tops—up to 5 inches diameter—six on plant disbudded. We're going to try flowering the same in December from these seeds."

—*The Winchester Florists, Winchester, Ky.*

"Last year we tried your florist strain of Asters as outdoor bedding subjects and they were wonderful. Just as good as those grown in greenhouses."

—*Kane Street Gardens, Klamath Falls, Ore.*

"Many thanks for your fine work in producing those two remarkable strains of Asters, White Ball and Pink Ball. They are the finest Asters I have ever grown."

—*Victor H. Davis, Reading, Mass.*

"Ball Asters came through about 90% wilt-free, long stems, very good in open field."

—*Swanson Garden Service, Croton-on-Hudson, N. Y.*

## Ball Asters

(WILT RESISTANT—12,000 S.)

SEE CULTURAL INSTRUCTIONS ON PAGE 17.

If you think there's no money in Asters, you've probably been growing the ordinary half-single kind with large, open centers. Why not try these new, fully double Ball Strains? We're selling more and more of them to growers everywhere who say they can't afford the cheaper seed. When you stop to consider that 2 dozen more salable flowers out of a trade packet will pay for the extra seed cost, it seems a real waste of labor to grow the ordinary sorts.

- **Azure Ball.** Of the same fully double, long-stemmed type as our other Ball Asters, but with slightly smaller flowers (3 to 3½ in.) of clear light blue. Blooms August 20.
- **White Ball.** Large flowers (3½ to 4 in.), exceptional doubleness, and fine, stiff stems are the outstanding points about this excellent pure white Aster. Blooms about August 25.
- **Rose Ball.** Rich, deep rose with fully double 3½- to 4-inch, incurved flowers which resemble a medium sized Chrysanthemum. Blooms August 25.
- **Purple Ball.** (New.) Large incurved flowers similar to the popular Rose Ball except for its bright purple color. Blooms August 20.

Our constant breeding and research which have made these Asters possible are a part of Ball Service—a service which we are continually striving to improve in every way possible.

**NOTE:** Because of their extreme doubleness these Asters are shy seeders and are sometimes in short supply. Early ordering will help insure your requirements.

- **Pink Ball.** Large (3½ to 4 in.), fully double flowers of soft shell-pink carried on long stems. Blooms August 20. Excellent flowered under lights in early spring. This fine strain throws few laterals, so needs very little disbudding.
- **Phlox Ball.** (New.) The newest of the Ball Series of Asters with fully double, medium large flowers of soft peachblossom-pink. Blooms September 1.
- **Early Pink Ball.** (New). A light shell-pink similar in color to Pink Ball but a week earlier. Fully double, 3½ inch flowers on long, strong stems. Blooms August 12.
- **Ball Florist Mix.** A balanced formula blend of all the above extra double Ball type Asters.

Prices above 8, each. tr. pkt., \$1.75; ¼ oz., \$3.20; 1 oz., \$9.60.

**COLLECTION:** 1 tr. pkt. each of above named varieties (Except Early Pink Ball), 6 pkts., \$9.50.

### QUEEN OF THE MARKET

Early August-flowering class; rather short-stemmed. Partly resistant. We much prefer the new fully double Ball Strains which can be flowered at this season through additional early lighting. See page 17 for schedules.

- **White.** The earliest worth-while cut-flower white.
- **Ballet Queen.** Deep salmon-rose; very resistant.

**Dark Blue.** Fairly deep shade of purple.

**Flesh-Pink.** Shell-pink; deepening as it matures.

**Queen of the Market Mixture.**

# Making Ball Asters Pay!

## GENERAL CULTURE

"Resistance" to Aster wilt does not mean complete "immunity"! While the degree of resistance offered by these strains may vary somewhat in different localities, there is no doubt that they are far more satisfactory than non-resistant strains. Our past experience indicates that changing the location of the Aster planting regularly (or steam sterilizing) is a worth-while safety precaution. We sow them 6 weeks before planting out date. Three weeks after sowing, the seedlings go into 2½-inch plant bands; three weeks later we plant them without removing bands, which helps minimize transplanting losses. We space them a foot apart each way in beds so that conventional wire and string may be used for supports. We find cloth house protection a necessity if superior quality is wanted.

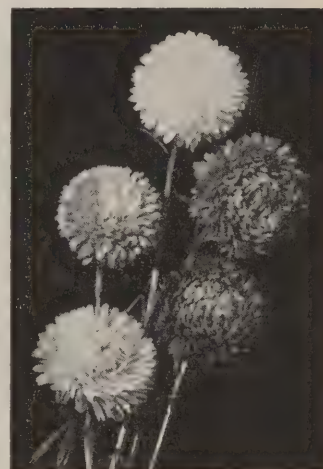

## OFF-SEASON ASTERS (UNDER GLASS)

Many growers have written us to say that their spring greenhouse Aster crops were the best paying crops that they had on their place. While Asters can be flowering any month of the year, the spring and early summer months seem to be the most profitable. The only important requirements are: 50° night temperatures and additional lighting, which must be supplied continuously from the seedling stage until plants are 20 to 24 inches tall. The

only exception is the period from May 1 to September 1, during which day length is long enough. 60-watt bulbs with reflectors, spaced 5 feet apart, or the lighting set-up you use for Mums is satisfactory. Light must be turned on from sundown to 10:00 p.m. daily.

Spacing may be anywhere from 8x8 to 10x10 inches—we use the latter for somewhat better quality. White Ball, Pink Ball and Rose Ball are especially fine for off-season culture. Azure Ball and Purple Ball do equally well, but these colors will be wanted in lesser quantity. Use sterilized soil for best results.

The following schedule worked out at Ohio State checks closely with our own experience where a 50° night temperature was used.

# Ball Begonias ~ the Most Useful

## FIBROUS ROOTED

30,000 seeds per 1/32 oz. Begonias are rapidly increasing in popularity as versatile all-around potted plants. They are equally "at home" in 5-inch pots, as less expensive plants in 3- or 4-inch pots, and in combinations of all sorts. Here is one blooming plant which will do well in the low-light, high temperature conditions of modern homes.

In addition, the stronger growing varieties, especially the F<sub>1</sub>

### FIBROUS BEGONIAS FOR BEDDING

Ordinarily you think of Fibrous-Rooted Begonias as a shade plant. Yet we have certainly been impressed with the wide diversity of use which is made of Begonias in open-sun flower beds in Europe. In certain parts of France, Switzerland and Germany they are the No. 1 annual plant in terms of popularity. Three years ago we tried six varieties in our annual trial gardens. That summer was warmer than average in Chicago. We were greatly impressed not only with their generally attractive appearance, but with the amount of interest which they created among visitors, trade visitors and laymen alike. Fibrous Begonias are commonly used in California for bedding.

As a general rule the F<sub>1</sub> Hybrids, Intermediates, and Tall varieties seem to respond best to open-sun outdoor planting. Try them on your customers. Fibrous Begonias, of course, can't be beat for shady locations.

Hybrids, make good bedding plants even in full sun—and for partially shaded spots they are ideal.

**Culture:** Use neutral (non-acid) peat for germination; no covering over the seed (except paper till they sprout). Keep surface of flat moist. Use half peat, half soil for potting. They must have 60° to keep them moving—and greenhouse shade in summer. Sow in January for flowering 2 1/4's, shifting to 4's for May sales.

**Ball White.** Rather small flowers but very freely produced. Tr. pkt., \$1.50; 1/64 oz., \$3.00; 1/32 oz., \$5.50.

## ANNUALS—Continued

### • BELLS OF IRELAND

(*Molucella Laevis*)

4200 S. This subject has become immensely popular with floral artists the past few years, being used in a wide variety of arrangements. May be used in the fresh or dried state and is easily grown in greenhouse benches, in pots, or outdoors in summer. Tr. pkt., 40c;  $\frac{1}{4}$  oz., \$1.25; 1 oz., \$3.75.

BELLS OF IRELAND

## Calceolarias

CALCEOLARIA, BALL MULTIFLORA NANA

- **Ball Multiflora Nana Mixture.** Large heads of medium sized flowers in brilliant reds, yellows and intermediate shades. The dwarf plants are wiry in growth with small, durable leaves which make for ease in handling and shipping. Tr. pkt., \$2.00;  $\frac{1}{128}$  oz., \$4.00;  $\frac{1}{64}$  oz., \$7.20;  $\frac{1}{32}$  oz., \$13.00.

#### ● EXTRA EARLY TIGERED

Solid heads of medium large flowers on dwarf plants; good color range. The outstanding feature of this strain is its earliness. It blooms a full month before other varieties, therefore costs you less to grow. Tr. pkt., \$2.00;  $\frac{1}{128}$  oz., \$4.00;  $\frac{1}{64}$  oz., \$7.20;  $\frac{1}{32}$  oz., \$13.00.

20,000 seeds per  $\frac{1}{32}$  oz. Calceolarias aren't at all difficult to grow from seed if a few simple requirements are met. In sowing use only loose, sterilized material—night temperature 60°. The seed is very fine and no soil covering should be used. When large enough to handle, they should go into  $2\frac{1}{2}$ -inch bands—later into 4- or 5-inch pots for finishing. After banding, a 48° house will suit them nicely. A regular insect control program is essential (aphis will wreck them in no time). We spray once a week with Parathion. From late February on they'll need protection from direct sun. Water only when dry; "wet feet" will cause yellowing of foliage.

#### ● HYBRID MIXED (HYBRID)

(New.) Brilliant reds and rich yellows (some spotted with contrasting maroon) make up this outstanding blend of genuine F<sub>1</sub> Hybrids—the first ever offered in Calceolarias. Flowers are medium in size but produced in great cloud-like heads. Because of the exceptional vigor of this strain, it should be finished in 6-inch pots rather than 5's.  $\frac{1}{2}$  tr. pkt., \$1.75; tr. pkt., \$3.00.

**Cloth of Gold.** Medium large, solid golden yellow flowers. Very showy. Tr. pkt., \$1.25;  $\frac{1}{64}$  oz., \$2.50;  $\frac{1}{32}$  oz., \$4.50.

● **Dwarf Tigered or Spotted.** Medium large flowers in spotted shades of red, yellow and rosy bronze. Dwarf and compact. Tr. pkt., \$1.25;  $\frac{1}{64}$  oz., \$2.50;  $\frac{1}{32}$  oz., \$4.50.

● **Grandiflora Dwarf Mixed.** Extra large (2-2½ in.) flowers in unusual and striking colors are carried on fairly dwarf plants. Tr. pkt., \$1.25;  $\frac{1}{64}$  oz., \$2.75;  $\frac{1}{32}$  oz., \$5.00.

**Perennial Hybrids (Rugosa).** Large heads of quite small flowers in a brilliant color mixture. Tr. pkt., \$1.25.

# Celosia

28,000 S. One of our finest, most uniform and colorful offerings for annual plant sales. Celosias will come into bloom prematurely with small heads if growth is checked. Therefore, for spring plant sales do not sow earlier than 6 weeks before planting-out time and grow warm—at least 60° nights.

**CRISTATA.** The popular cockscomb type. The taller varieties provide good cut flowers in either the fresh or dried state, while the dwarf kinds make nice pot plants in summer. Closer spacing decreases size of heads, making them more suitable for cutting.

## ● TOREADOR

**ALL-AMERICA SELECTION** (New.) Large combs up to 12 inches across of lustrous, bright red with scarlet highlights are carried on plants 18-20 inches high. Stems are very stiff and sturdy with luxurious, bright green foliage. Most plants produce one stem with one enormous comb; the balance several base branching stems, each with a large comb. Plants from seed sown in early April will be in full flower throughout August and September. Excellent as a bedding plant or for cutting. Holds its color well when dried if stored in a cool, dry place away from the sun. Normal spacing 12 in. Tr. pkt., 75c; 1/8 oz., \$1.65; 1/4 oz., \$3.00; 1 oz., \$9.00.

PINK RAINBOW

RED RAINBOW

## Grow Colorful **COLEUS** From Ball Seeds

100,000 S. Growers throughout the country are relying more heavily on Ball Rainbow Mixed Coleus seed for their requirements of this fine foliage plant.

Originated over a decade ago by George J. Ball, our seed of this uniquely fine strain is grown in our West Chicago greenhouses under our careful, daily supervision.

### THREE NEW VARIETIES

We are now offering three distinct separate colors originally selected out of the Rainbow Mixture. These strains come at least 90% true to color types shown above—the balance being entirely salable specimen plants. This offer, therefore makes straight colors similar to named cutting varieties like Butterfly, Christmas Gem and Brilliancy available from seed. Cuttings from these seedlings root freely, of course. The plant habit is dwarf and base-

branching, and satisfies all the requirements of this versatile shade-house plant subject. Ideal for combination boxes or pots.

### UNSOLICITED COMMENTS:

"Ball's Rainbow Coleus were excellent. Others that I bought were very drab in comparison."

—Mr. Whitney Hames, Clawson, Mich.

"Your Coleus Rainbow Mix has almost created a sensation with my customers—sold one party a truck load."

—C. N. Shell, Shell Plant Farm, Beaumont, Tex.

### BALL RAINBOW COLEUS

Rich reds, yellows, coppers, pinks, all abound in infinite varieties of tones and shades. Uniform habit. Ideal for combinations, shade planting, and wherever Coleus are useful. This seed is greenhouse-grown at West Chicago.  $\frac{1}{2}$  tr. pkt., \$1.00; tr. pkt., \$1.75;  $\frac{1}{64}$  oz., \$2.75;  $\frac{1}{32}$  oz., \$5.25;  $\frac{1}{16}$  oz., \$9.50.

# Ball Cyclamen

We conduct regular and extensive flowering trials of Cyclamen strains from the world's leading seed producers in addition to examining these strains, as they are grown in Europe and America.

Our conclusion is that no one Cyclamen seed specialist excels in all varieties. As a result, the Ball strains include only those in which each grower (according to our observation—not the grower's claim) excels.

Try **Gloxinias from seed**. A December sowing (70° and very light or no covering for best germination), carried along at 65° during the winter will make lovely 5-inch blooming plants in June. Suggest soil made of 1/3 peat, 1/3 light organic soil and 1/3 sand. Shade lightly and water with care never to let them dry out. Keep them growing. 3-inch spacing in flats or open beds is O.K. instead of small pots for first transplanting. 25,000 seeds per 1/32 oz.

## PANZER SCARLET—Originator's Seed

# Impatiens

## "SULTANAS"

We feel that Impatiens have been underrated by many bedding plant growers. While the color range is limited in both the separate color offerings and in the mixtures, these plants do make exceptionally satisfactory bedding plants for shade. The widespread use of certain Impatiens varieties, cutting propagated, attests to their worth.

It's important for most bedding purposes to confine your use to the dwarf strains which retain much better plant habit in late stages of growth. Impatiens tolerate a wide range of temperature and grow well with most spring subjects. Try them from seed—one of the few annual subjects which can be depended upon to produce **an abundance of colorful blooms** throughout the summer in shade. 66,000 S.

**DWARF IMPATIENS.** 6 to 8 inches.

**Dwarf Bright Orange.** See listing at right.

**Dwarf Bright Rose.** A luminous shade of deep rose. Compact and free flowering.

### ● IMPATIENS, DWARF BRIGHT ORANGE

**For Early Summer Cut Flowers Outdoors:** If you failed to make an outdoor sowing last fall, good results can be had from a spring sowing—if you get your seed in the ground just as soon as the frost is out of it. Figure on 2 lbs. of seed to sow an acre or 1 oz. for 600 to 700 ft. of row, if seeds are sown about 1 inch apart. Height outdoors 2 to 3 ft.

**Under Glass—Spring Flowering:** For indoor growing, Larkspur is a nice crop to follow late Mums. Well started 3-inch banded or potted plants should be ready, and are produced by a December or January sowing. Space at least 12x12 in. on ground; 10x10 in. on raised beds should be ample. The after-Mum planting is generally started out cool, 45° nights, increasing to 50° or more with spring weather. Height indoors 4 to 5 ft.

**Varieties:** The newer Regals, Supremes and Super Majestics have largely improved most of the older Giant Imperials, being stronger growers with better flower spikes. If you're not familiar with them, we suggest that you confine the bulk of your planting to the "7 Best" listed below.

## "7 BEST"

This list is based on our greenhouse flowering trials. Generally strains which are found best under glass seem also best adapted to outdoor culture.

- **Salmon Supreme.** Medium salmon-rose; heavy, fully double spikes.
  - **Dark Blue Supreme.** Deep violet-blue; improves Blue Spire.
  - **Lilac Supreme.** The best clear lavender; no orchid shading.
  - **White Supreme.** The most vigorous white according to our trials.
  - **Regal Salmon-Pink.** A shade lighter than Salmon Supreme. Very nice.
- Prices above 5, each: tr. pkt., 40c; ½ oz., \$1.00; 1 oz., \$1.80; 4 ozs., \$6.00; 1 lb., \$18.00.

The dot (●) indicates varieties most dependably satisfactory in our experience and observation.

# Tall (Cutting) Marigolds

10,000 S. Most any grower will find a spring crop of cut-flower Marigolds quite profitable. A January or February sowing, spaced about 4x5 inches and grown single stem, will flower April and May. The All-Doubles and Carnation-Flowered types are most popular, but be sure to include some of the Chrysanthemum-flowered Mission Giants for their excellent novelty value.

## FIVE BEST FOR CUTTING

- **Ball Giant Orange.** Similar in type to All-Double Orange but somewhat larger flowered and of a more uniform deep, bright orange color.
- **All-Double Orange.** This belongs to the *Fistulosa* or large flowered, solid quilled-petal type. Nearly 100% double. An excellent, long-stemmed cut-flower strain.
- **All-Double Lemon.** Identical to the above, but a clear lemon-yellow.
- **Gold Improved.** Odorless. The popular Carnation-flowered intense orange. Excellent for greenhouse forcing.

# Profitable

25,000 S. There are two basic schedules for growing Pansies for bedding plant sales:

**Midwinter Sowing** in December or January. After they have germinated carry them along as cool as possible till spring—transplant them into frames in March (Chicago latitude) for May sales. Carl Hellgren, Glenbard Gardens, Lombard, Ill., sows early December, transplants 30 to a "half flat," and carries them in a cold house 35-40° till March 1. Then he sets them out in frames where they start to bloom early May and are sold for \$1.50 per flat.

**Summer Sowing.** (Early August.) This is the most popular time for establishing plants which are spaced about 4 x 6 in. in frames, given some protection over winter—loose straw, perhaps. Plants should be well established before winter sets in—even budded so that blooms will be available early in the spring to help sell the plants.

#### FOUR ACES FORMULA MIX

(New). Recognizing that each of the several Pansy specialist's strains possesses some important advantage, we have formulated this special mixture which, properly handled, should be an ideal Pansy strain. This mixture includes seed of the originator's **Roggli Giants** with their deep, bright shades and compact habit; **Steele's Jumbo** for early blooms; **Canadian Giants** with their exceptional flower size; and **Ball Giant Mixed** to complete a full, well rounded color range.

Grown slowly and cool, the slight variations in habit of growth of these strains will not be found objectionable. Each of your Pansy customers will find his favorite strain in this mixture plus qualities imparted by the other top-notch Pansies. Here is a Pansy mixture that you can promote with complete confidence. Special note: sow thin and transplant all normal seedlings; otherwise, as in any other mixture, color balance is lost.

Tr. pkt., \$1.00;  $\frac{1}{8}$  oz., \$2.75;  $\frac{1}{4}$  oz., \$5.00; 1 oz., \$15.00.

- **Ruffled Rainbow.** (Pictured below). An unusually uniform dwarf mixture characterized by medium large flowers with distinctly ruffled petals and a wide range of colors.

Tr. pkt., \$1.00;  $\frac{1}{8}$  oz., \$2.75;  $\frac{1}{4}$  oz., \$5.00; 1 oz., \$15.00.

# Ball Hybrid Snaps

**(F HYBRID)**

(ANTIRRHINUM)

**(F HYBRID)**

Snapdragons unquestionably head the list of seed grown greenhouse cut flower crops—and rightly so. Because outdoor-grown Snaps seldom equal the quality of well grown greenhouse material, they are virtually free from this competition. Modern F<sub>1</sub> Hybrids with their greater vigor and faster growth rate have contributed greatly toward this end. Using single stem culture and summer flowering greenhouse varieties, it's possible now in most areas to produce good Snaps almost the year around.

The varieties listed below are the result of a never-ending Snapdragon breeding program here at Ball's—a program that has but one goal in mind: **Better Snaps for florists—everywhere!** By the way, our Snapdragon breeding workshop is in full bloom in April and May. We'll be happy to have you stop in and see what we're doing.

COMPLETE LIST OF VARIETIES — OUR RECOMMENDATIONS ARE DOTTED

**ABOUT BLOOMING DATES.** Based upon their performances in our greenhouses here in West Chicago, we have classified the Snap varieties listed here as early (E) for late fall and early winter, midseason (M) for midwinter and early spring, late (L) for late spring, and the summer group (S) which indicates those varieties especially adapted for summer greenhouse blooming from May to September.

The dates which follow the season classification for the more popular **early** and **midseason** varieties represent the flowering dates from an **Aug. 20** sowing grown single stem on raised benches

in a 50° night temperature. Blooming dates for **late** varieties are from a **Sept. 9** sowing grown as a pinched crop on raised benches at 50° nights. Remember, though, that conditions vary in different localities and that keeping your own records will prove an invaluable guide in planning future crops.

It should be borne in mind that while many of the early and midseason varieties are excellent for late flowering if sown later, late varieties cannot be flowered early unless sown in June in our locality.

## BRIEFS ON SNAP CULTURE

### Soils

Good Snaps can be grown in a wide variety of soils. As a general rule any soil that will grow good Mums will grow good Snaps. The really important point is that it contain **plenty** of organic matter. While this may take the form of manure, be sure it is well rotted. As a matter of fact, peat is generally preferred because the bacteria which are necessary to decay manure rob the soil of essential plant nutrients.

The amount of organic matter which a soil needs depends upon its basic structure. Heavy, clay-like soils will need more than loose, sandy sorts. If an average good garden or field soil is to be used, one part of organic matter should be incorporated with each two or three parts of soil. To this should be added three pounds of 20% superphosphate per 100 square feet of bench area before steaming. Other than this we prefer to depend upon regular feedings as soil tests indicate their need rather than to load the soil with too much fertilizer to start with.

### Sterilizing

We like to steam sterilize our soil before benching, too. It cleans up disease organisms, kills soil-borne weed seeds and insects and tends to improve the soil's physical condition. Low (8 to 10 lbs.) steam pressure does the job for us. Holding soil temperatures at 180° for half an hour after this temperature has been reached is all it takes. After sterilizing, a heavy leaching with clear water will tend to prevent an excessive build-up of nitrates which might injure young roots.

### Seed Sowing

Vermiculite, peat, or soil and peat mixtures all make satisfactory materials for germinating Snap seed. We like to have the flats well watered before sowing, which may be done either broadcast or in shallow rows. We prefer the latter since it permits better aeration after the seedlings get started. No additional soil covering is needed for this fine seed—a light misting with a fine spray will settle it into the soil. If weather is hot or windy, flats should be protected with cheesecloth or paper shade until well up, then they will enjoy full light and a cooler, airy location. Seeds should germinate in 3 or 4 days in summer, 7 or 8 days in winter in a night temperature of 60°.

### Planting

If bench space is available, we like to bench seedlings direct—less labor and better growth. It works nicely even in hot weather, if the soil is moist before benching, seedlings are planted shallow, and misted within minutes of benching and regularly until new roots show.

In regard to the matter of spacing, we believe 3 x 6 inches is the most economical and profitable for a winter single stem crop with 3 x 5 inches being enough for late spring and summer crops. We space our pinched crops 7 x 8 inches, finding this satisfactory for most varieties. If you are obliged to transplant, band or pot seedlings, do not pinch them until plants have been benched and have taken hold. To pinch before benching will usually result in only two top breaks rather than the four or so that each plant should produce. We like to pinch when plants are about 8 inches high, leaving 3 good pairs of leaves.

### Summer-Fall Snaps

... are being grown more every season. Direct planted and grown single stem, they flower in a little over two months from benching, and seem to be in good demand. Short growing time means low production costs. Make several sowings, so they will keep coming in.

### Sowing Dates

The dates given here are intended as suggestions only—based on our experience here in the Midwest. Various things can throw them off. Examples:

1. Hot, dry, bright fall—will bring Christmas crops in early.
2. Dark, cloudy fall-winter delays late winter crops.
3. The tables are based on medium early varieties on raised benches, 50° night temperatures most of the winter, at least, 45° nights or ground beds will take longer.
4. Your local climate. Where winters are warm and sunny, winter Snaps will bloom faster.
5. Varieties differ in blooming dates.

There are several important advantages of germinating Snap seeds in rows. If you use soil as a germination medium, the soil can be thoroughly "cultivated" and aerated by breaking the surface between the rows until the seedlings can be pricked off. Then, too, if damp-off becomes a problem, it is less apt to spread through the seed flat, tending to run down to the end of a row and out. Another important advantage is that when sown in rows the soil may be compressed to form the row and moisture is better controlled down in the small "trenches"—providing an ideal environment for seed germination.

### Single Stem

No-pinch growing seems to be accepted more each year. Reasons:

- A. Quicker crop—gets in 2-3 weeks sooner. Bench cuts out faster, more evenly.
- B. Fewer culls—more uniformity.
- C. **Controlled** flowering date—by making a succession of properly scheduled sowings, you can be in cut when you want them.

PACIFIC PINK

## WHITE

### No. 25 MINARET

This fine white combines the close-spaced spike of No. 16 with a larger, longer stem which should make it quite valuable to cut-flower growers. Fred Campbell of the Floral Park Greenhouses, Butte, Montana, says of this fine variety: "Late July sowing of No. 25 Minaret flowered for Christmas and early January. Stems 3 ft. long and excellent color. Thanks for sample."

**Pacific White.** A pure white with large, well spaced florets. Spike is similar to Ball White No. 16, but stems are somewhat longer. A bit later than No. 16 but earlier than Avalanche. Recommended for both greenhouse and outdoor use.

- **No. 16 Ball White—Medium Tall.** This early pure white is the most popular variety on our entire list.

**No. 99 Ball White.** Averages 4 to 6 inches taller than No. 16.

**White Giant.** Good long-stemmed white for outdoor growing. We prefer our No. 16 Ball White for greenhouse use, although some growers have reported favorably on White Giant for this purpose.

**Gardenia Imp.** Pure white. Branches somewhat. A fine outdoor strain.

**No. 5 Ball Dwarf White.** An ideal pot plant variety.

**Avalanche.** Finest white for outdoor growing; also excellent for greenhouse use although later than No. 16.

## LAVENDER, BLUE and PURPLE

- **No. 1 Lilac-Lavender Improved.** Early blooming, silvery lilac. Good stems with long flower spikes.

**No. 3 Ball Blue Improved.** Deep bluish lavender; long spikes.

- **No. 21 Purple Heart.** Long-stemmed and large-flowered, bright violet-purple. Early blooming.

# Ball COLUMN Stocks

(NON-BRANCHING)

16,000 S. The most important points in growing good greenhouse Stocks are: (1) plant only in steam-sterilized or fresh soil to avoid root rot; (2) grow them cool—not over 50° nights. A spacing of 3x6 inches is ample for good quality and they may be safely sown in our latitude from July 15 to February 15. Later sowings may come blind. Constant breeding and selection maintain a uniformly high percentage of doubles in our strains, which may be further increased if the largest seedlings are selected in planting or thinning.

**Our best greenhouse varieties are dotted (●).**

## PINK, ROSE and Red

**Pacific Pink** (Pictured at left). A bright, luminous salmon-rose-pink without the bluish or orchid cast of other pinks and roses. Somewhat later than most Column Stocks, and is at its best in spring.

- **No. 22 Ball Supreme.** A long-stemmed, vigorous growing variety with fine, heavy spikes of rich silvery rose.

**No. 11 Ball Pink.** A medium pink. Earlier and somewhat lighter than our No. 22 but not quite as long-stemmed.

**No. 14 Ball Rose.** An early flowering, fairly deep rose-pink. Darker in color than Supreme No. 22.

**No. 9 Chamois-Pink.** A warm rosy buff color. Good stems and flower spikes.

**No. 7 Malmaison Pink, Improved.** Long stems and spikes of soft shell-pink, a popular color.

**No. 6 American Beauty.** Rich deep American Beauty or carmine-rose.

- **No. 8 Ruby Improved.** A brilliant scarlet-crimson without the purple cast of other reds.

## U.S.D.A. DOUBLE PINK

A U.S.D.A. development which improves the Hansen dark-leaved single, light-leaved double strain. Light-leaved doubles may be selected in seedling stage. In our greenhouse trials stem length was greater than Hansen's but not as long as regular Columns. Doubles retain some light leaf color in blooming stage.

## MISCELLANEOUS VARIETIES

- **No. 20 Ball Apricot.** Long spikes of rich apricot tinged pink.

**No. 24 Deep Apricot Improved.** Darker than No. 20.

**No. 17 Gold Standard.** Creamy ivory-yellow.

### No. 26 BUTTERSCOTCH

This fine, creamy yellow is a definite improvement over present strains in stem length, flower size and color. Highly recommended.

**Yellow Wonder.** Popular ivory-yellow for outdoor growing. Branches slightly.

**No. 10 Mixture.** Our own formula mixture.

**PRICES** all Column Stocks, each: ½ tr. pkt., **75c**; tr. pkt., **\$1.25**; ¼ oz., **\$2.75**; ½ oz., **\$5.25**; 1 oz., **\$10.00**.

## NOTES ON ZINNIA CULTURE

**For Cutting:** Some protection by cloth or a greenhouse will produce long-stemmed, large-flowered Zinnias which make excellent cut-flower material. Either the Dahlia-Flowered or the Lilliputs are O. K. for this. An outdoor sowing as late as July 1 in our latitude will produce a fine crop of cut Zinnias outdoors before frost.

**For Bedding:** Always popular for their ease of culture and fine, vivid colors. Zinnias should account for a substantial part of your bedding plant sales.

Don't neglect the novelty value of the small-flowered Lilliput type, the immense size of the Giant Mammoths, the curled petals of the Fantasy type.

**Warning:** Zinnias are native to warm temperatures and need 65° minimum—better, 70°—to germinate satisfactorily.

Dahlia-Flowered Zinnias pictured at left, top to bottom: Canary Bird, Purple Prince, Polar Bear, Illumination and Scarlet Flame. All these and many others are in our famous Gold Medal Mixture.

# PERENNIALS

We recommend sowing perennials in spring. Germination will be better than during the heat of midsummer and the larger plants produced will winter over more satisfactorily. In addition, if sowing is done in January or early February, quite a few will bloom the first season.

We feel that every grower should include at least a few perennials in his outdoor planting. They get along admirably with little care, and many make really profitable cut flowers.

Ed Hoffman, bedding plant grower of Wilmette, Ill., found plants in Market-Paks very salable last spring.

Max Bergholdt of Green Mill Gardens, Addison, Ill. This firm pioneered the "Chicago Half-Flat" among bedding plant growers. Mr. Bergholdt was quite pleased with Tomatoes in Market-Paks this past season.

Nick Schaul, grower of Janesville, Wis., was successful last spring with a number of subjects in Market-Paks, including Peppers, Tomatoes, Petunias and Pansies.

# MARKET-PAKS

## SMALL "PAKS" VERSUS LARGE FLATS

"Why should I use these small containers when it lowers my unit of sale?" asks the alert bedding plant grower.

Here is the answer as we see it.

Bedding plant growers would, of course, prefer to sell larger quantities of bedding plants. But many of your retail customers don't want to buy individual varieties of bedding plants in quantities of three, four, or five dozen, any more than the average consumer wants to buy eggs, or oranges, or anything else three dozen at a time. The fact that bedding plants are still sold out of pots shows the importance of this "dozen or less" market.

These small "pack" containers are a compromise between pots and large flats. Selling from pots is expensive and in many markets inefficient. Selling from large flats either overloads the customer with too many of one variety and color, or consumes selling time, digging and wrapping plants—with all the headaches that involves.

The customer's interest is always served! If

your customers **want** to buy plants by the dozen, someone will eventually offer them that way. Don't neglect the interest of Mrs. Jones, who wants "a few white Petunias to plant up a porch box." Offer her a three-dozen-plant flat for \$2.50, and unless you're a super-salesman your large flat offer will drive her to another outlet where she can buy the quantity she wants. Incidentally, with a good variety of types and colors of bedding plants to offer in small packs (all priced substantially under a dollar) available for her to choose from, you can suggest other subjects for other locations in her yard—edging, shade, background planting. This way **you will quite likely increase your total sale.**

Bedding plants are not difficult to sell if offered in "salable" quantities. Be sure your container is adapted to your best potential buyers.

## MARKET-PAKS

A new, more efficient plant pack, MARKET-PAK has several important advantages over other similar multiple-plant containers.

**Larger.** Dimensions  $7\frac{1}{2} \times 5\frac{1}{2} \times 2\frac{3}{8}$  inches deep—allows  $3\frac{1}{2}$  square inches per plant for 12 plants, total approximately 42 square inches. This generous spacing permits stocky plants and real quality growth.

**Easy to handle.** A special design of the nesting edge **completely eliminates** the sometimes objectionable tendency of fabricated containers to stick together.

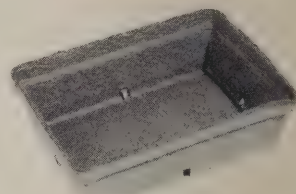

**Lighter** for handling and shipping costs. Weight per 200 units packed, approximately 20 lbs.

**Attractive, brick-red color, smooth finish—**goes well in any display arrangement.

**More durable—**hard pressed wood pulp product contains no material toxic to plant growth.

**Better drainage.** Four  $\frac{3}{8}$  inch slots where sides join bottom insure adequate drainage for all parts of container.

# BALL HALF FLATS

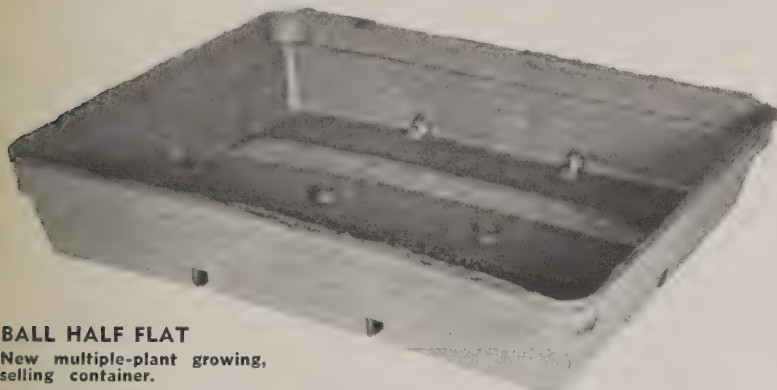

The Ball Half Flat is made of the same asphalt impregnated wood fiber as the well-known Market-Pak. This plant growing container is designed to fill the requirements of the grower whose trade indicates a preference for wider spacing or for 2 or 3 dozen plants per pack.

Measuring 10x12x2½ inches, the Ball Half Flat is sturdily built with special rib reinforcing on the bottom—adequately drained with eight ⅜ inch holes on the sides and bottom, and

has the same attractive, smooth finish and brick-red color of Market-Paks.

The Ball Half Flat can accommodate 40 bedding plants with approximately the same space per plant as is found in Market-Paks with 12 plants—a little over 3 square inches per plant.

The Ball Half Flat will also be found useful for other general greenhouse purposes, such as a seed flat (it is unnecessary to sterilize before using), in carrying small plants, etc.

## ALUMINUM POTS

Foiltainer aluminum pots have the natural appeal of clean, bright aluminum. The many advantages of this modern growing-selling pot include very light weight for shipping, no breakage, no algae or lime discoloration. Foiltainer pots require less watering than conventional pots—a considerable labor saver. Planted with light soil, they become the ideal plant shipping container with weight one-eighteenth that of the clay pot. We have tested these pots and find that they will support superior plant growth when properly handled.

Well-grown plants look and sell better in Foiltainer pots.

This year we grew 18,000 plants for our trial ground in Jiffy-Pots. Here are 25 Jiffy-Potted Petunia plants at planting out time, compared with a check lot in clay pots. Note root growth.

Ken Fujii, Sec. of the Northern California Carnation Growers Assn., reports complete satisfaction with Jiffy-Pots on Carnations in Calif.

Andy Podesta, Palo Alto, Calif., tested Jiffy-Pots on Poinsettias. Found better growth — practically no foliage yellowing and dropping and much labor saved in transplanting.

# BALL Veneer "PlanTrays"

These are our popular veneer **PlanTrays** which bedding plant growers the country over have been using for growing and selling small plants for bedding. They are now available in three types.

The **Regular**—No. 1-R, No. 2-R and No. 3-R—of light weight veneer for fast-growing plants. Each flat holds 12 plant bands.

The **X-Type**—No. 2-X and 3-X—made of extra heavy veneer for longer life. For use where a longer growing period or a sturdier flat is required. Each flat holds 12 plant bands. These X-Type PlanTrays can be used with or without bands.

The **S-Type**—**Special PlanTrays**—each holding 25 plant bands. For the grower selling small plants in quantity, this is the answer.
